## (54) DISPLAY DEVICE

### (57)Abstract:

PURPOSE: To speed up the switching of video signals by directly controlling a demultiplexer by an output from a controller based upon command data from a computer, successively and selectively switching video signals supplied to input terminals and outputting the switched video signal to an output terminal.

CONSTITUTION: The demultiplexer 2 is controlled by the controller 5, one of video signals supplied to many input terminals of the demultiplexer 2 is selected and outputted to one of plural output terminals of the demultiplexer 2. For instance, video signals outputted from the demultiplexer 2 at the speed of 3 to 10 frames per second are switched. Consequently a still picture can be observed as a moving picture and a display effect with strong impact can be obtained.
